Customizable User Interface

Vestel provides a customizable user interface design with its new generation mainboard. The background picture, icons and colours can be changed based on the customer needs.

HTML5 CMS Launcher   Media Player   Signage Settings   Applications

HTML5 CMS Launcher

Vestel's new generation mainboard is designed to run HTML5-based CMS applications on the embedded browser. Applications can be installed from a URL or USB stick to the internal storage, using HTML5 CMS Launcher.

Media Player

Play images, video and music files from a USB stick or internal storage. Create playlists using a combination of media types.

Applications

MB400VS provides versatility with a wide-range of pre-installed applications such as Vewd for displaying the web content, VSignLite as a local CMS, EShare for screen-sharing, and Crestron Connected V2 for connecting to other certified A/V equipments. Install third-party application from a USB stick or through browser. Vestel also provides the installation of third-party application at production stage.
